Type: Flow Line	#		
Comment:	Underground flowlines are from well to treater, from well to compressor and from compressor to flare for each well. All other processing lines are above ground. Conoco has as built drawings for each location. At compressor there are 2-2" fiberspar lines GPS 39.66725, -104.11816 and 39.66725, -104.11816.

Comment:

Lynn Coffman with Conoco was on location testing treater to compressor lines. Conoco has waiver for alternate testing on above ground piping that initially did not meet the requirements of the Flowline NTO, however, after further review the waivers were accepted by COGCC for the NTO. Wells SI for testing. Two separate Crystal gauges-one for each well. Material of flowline Fiberspar. Grimm 54/53 psi and Sunset 53/47 psi compressor to well test. Flowline pressures at wellheads were 62 psi on Grimm and 78 psi on Sunset during testing. On 6/15/2017 inspector met with Conoco representative on site for testing of vent lines with 14 oz of psi to combustors. The "Skillet" method was used (ASTM).
