As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

We had a spill that was found yesterday 6/29/17 at around 2:15 PM by a Lease Operator on the Pioneer 34-27 well site (API# 05-071-08548). The operator found the production tank on location had overflowed . The Operator shut in the well, stopping the overflow and called water trucks to lower tank level. It is estimated at this time that 10bbls of produced water were spilled with no State waters involved. It is also estimated that 8bbls of the produced water spilled remained in the containment around the tank and only 2bbls left the containment and ran a short distance off location.
