## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Spoil material that is being treated on site by land farming is from drill cuttings and from spoils that were uncovered during the interim reclamation of the pad in 2012.  
During site reclamation on September 20, 2012, approximately 6,500 cubic yards of material that appeared to be from drilling or completions operations pit spoils were uncovered.  
This newly discovered material was segregated from the material that is currently being land farmed (approx. 3,149 CY) and stacked on the pad site adjacent to the wellheads.  
To properly treat (land farm) this material, it was desirable to spread out to 18" in depth to allow as much contact with sunshine and atmosphere while being treated with fertilizer high in Nitrogen and Phosphorus and occasionally turned during land farming operations.  
Since there was not enough room to spread this material out and landfarm it on the J13 697 wellpad, Linn Operating, Inc. sought and received permission in 2014 from Chevron and Caerus to transport and treat approximately 9,136 cubic yards of this material on the I11 697 pad on Caerus/Linn estate.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Samples will be taken semi-annually (twice a year) in the summer and fall.  
• Phase I - Composite sample will be taken from 8 locations on the spoil pile in early summer and analyzed.  
o If composite sample passes, discrete samples will be taken to confirm the composite samples.  
o If discrete samples pass, spoil will be buried per COGCC rules and interim reclamation of the pad will take place.  
o If discrete samples fail, landfarming will continue.  
o If composite sample fails, landfarming will continue.  
• Phase II - Composite sample will be taken from 8 locations on the spoil pile in late fall and analyzed.  
o Procedure will be the same as Phase I

### Proposed Groundwater Sampling

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Approximately 513 cubic yards of spoil material remained on the J13 697 wellpad and is being treated by land farming. Lab results from samples taken in 2011 initially reported failure of TPH at high level of 1420 and benzo(a)pyrene at high level of 0.14. Samples taken periodically from 2011 report TPH achieved COGCC Table 910-1 in 2013 at 85. The well pad underwent interim reclamation in 2014 with allowance for the continued landfarming of approximately 513 cubic yards.

## REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

In 2017, the 513 cubic yards of material was spread out even more to an average depth of approximately 8". Per Dave Nicholson's analysis of the pre-treatment lab report, 100 lbs. of nitrogen fertilizer and fulvic acid will be added per each treatment. As of this date, the landfarmed spoils have been tilled two times without the addition of amendments, pending Dave Nicholson's recommendations. Amendments will be added beginning with the next tilling. Spoil will be turned over with a Kubota farm tractor pulling a chisel point plow 8 to 10 times (depending on weather and snow conditions) during the warm months in 2017. The soil will be turned over with the frequency established in the plan as a minimum or with a higher frequency if possible. The soil has been spread out to increase exposure to the atmosphere and sunlight as much as possible on the production pad.

## RECLAMATION PLAN

### RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Pit will be backfilled with treated spoils, pit excess spoils, and pad excess spoils. Pad slopes will be reclaimed not to exceed 3:1 slope. Horizontal ripping, stair-stepping, grooving, tracking, or pocketing on slopes will be utilized to reduce erosion. Surface roughening shall be utilized on all areas receiving revegetation. Topsoil will be spread over all areas to be revegetated. These areas are identified on the attached drawing. Seed applied by drill will be covered by weed-free straw, mulched and crimped. Seed applied by hydroseeding will be tackified. A copy of the seed mix is attached. Monthly inspections for physical signs of compaction alleviation will be conducted by a qualified inspector while conducting stormwater inspections except when the location is in winter exclusion status. The location will be inspected during the growing season by a qualified contractor capable of identifying noxious weeds and selecting and applying the appropriate chemical to eradicate those noxious weeds.

Is the described reclamation complete? No

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim? ☐ Final?

Did the Surface Owner approve the seed mix? Yes

If NO, does the seed mix comply with local soil conservation district recommendations? \_\_\_\_\_
