## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Samples will be taken semi-annually (twice a year) in the summer and fall.

- Phase I - Composite sample will be taken from 8 locations on the spoil pile in early summer and analyzed.

- o If composite sample passes, discrete samples will be taken to confirm the composite samples.

- o If discrete samples pass, spoil will be buried per COGCC rules and interim reclamation of the pad will take place.

- o If discrete samples fail, landfarming will continue.

- o If composite sample fails, landfarming will continue.

- Phase II - Composite sample will be taken from 8 locations on the spoil pile in late fall and analyzed.

- o Procedure will be the same as Phase I

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The landfarming operations have taken place since the summer of 2015. The landfarming material was spread out on location to a depth of approximately 18" on Sept. 1, 2016 and to a depth of approximately 12" - 14" in 2017.

## REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

In 2017, the landfarmed material was spread out even more, reducing the depth of the material being tilled to approximately 12" - 14". A Kubota farm tractor with chisel point plows has tilled the soil three times so far in 2017. Based on analysis of the soil samples for nutrients, fulvic acid, phosphorus, and nitrogen amendments have been added to each treatment. Tilling will continue once every 10-14 days until the 910-1 standards are met or until weather prohibits activity. Treated material will be buried on site with minimum 3' cover.

## RECLAMATION PLAN

### RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Pit will be backfilled with treated spoils, pit excess spoils, and pad excess spoils. Pad slopes will be reclaimed not to exceed 3:1 slope. Horizontal ripping, stair-stepping, grooving, tracking, or pocketing on slopes will be utilized to reduce erosion. Surface roughening shall be utilized on all areas receiving revegetation. Topsoil will be spread over all areas to be revegetated. These areas are identified on the attached drawing. Seed applied by drill will be covered by weed-free straw, mulched and crimped. Seed applied by hydroseeding will be tackified. A copy of the seed mix is attached. Monthly inspections for physical signs of compaction alleviation will be conducted by a qualified inspector while conducting stormwater inspections except when the location is in winter exclusion status. The location will be inspected during the growing season by a qualified contractor capable of identifying noxious weeds and selecting and applying the appropriate chemical to eradicate those noxious weeds.

Is the described reclamation complete? No \_\_\_\_\_

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim? ☐ Final?

Did the Surface Owner approve the seed mix? Yes \_\_\_\_\_

If NO, does the seed mix comply with local soil conservation district recommendations? \_\_\_\_\_
