Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During abandonment activities at the Kugel V 18-5 well, soil with historical petroleum hydrocarbon impacts was encountered around the wellhead. The volume of the release is unknown. Based on the volume of impacted soil excavated, the release was reported to the COGCC on June 28, 2017. The excavation details and analytical results will be summarized in a supplemental report. A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.

How was extent determined?

Between June 19 and July 6, 2017, 17 soil samples were collected from the excavation and submitted for laboratory analysis of TPH, BTEX, pH, and EC. Laboratory analytical results indicated that BTEX, TPH, and EC concentrations were in compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Laboratory analytical results indicated 10 soil samples exceeded the COGCC Table 910-1 allowable limit for pH of 9.00 standard units (su) at levels ranging from 9.02 su to 9.42 su. However, these samples were collected below the root zone (greater than 3 feet below ground surface); therefore, no additional excavation is necessary. Approximately 1,630 cubic yards of impacted soil were excavated and transported to the Front Range Landfill in Erie, Colorado, for disposal. The general site layout, excavation dimensions, and excavation soil sample locations are depicted on the Excavation Site Map provided as Figure 2. The excavation soil sample analytical results are summarized in Table 1, and the laboratory analytical reports are attached.

Additional Spill Details Not Provided Above:

No further action is required. Laboratory analytical results for the soil samples indicate that BTEX, TPH, and EC concentrations are compliant with COGCC Table 910-1 allowable levels at the extent of the excavation. Laboratory analytical results indicate that pH exceeded COGCC allowable levels in 10 soil samples. However, these samples were collected below the root zone (greater than 3 feet below ground surface); therefore, no additional excavation is necessary. Groundwater was not encountered in the excavation. Based on the excavation soil sample analytical results, Kerr-McGee is requesting a No Further Action status for this site.
