**COMMENTS:**

In response to note on Field Inspection, document 663902912 dated 4/01/14 concerning a chemical container in NE tank berm: The chemical tank inside of the production tank containment in the NE corner of the 18A well pad (of which Mike Longworth mentioned in his inspection report) is a 130-gallon, gravity flow poly tank containing a 50/50 glycol/water mix. The tank is properly labeled, non-jurisdictional, and is inside the production tank containment as a matter of good SPCC practices. The presence of the tank inside the production tank containment is documented in the facility's SPCC plan and there remains sufficient capacity inside the tank containment to comply with SPCC regulations (i.e., the tank containment volume is sufficient to accommodate the footprint volume of the structures within the containment and hold the contents of the largest tank plus the precipitation from a 25-year, 24-hour rainfall event, as well as to account for surface irregularities within the containment). The glycol tank's presence inside of the production tank containment should not warrant any concern.

**H2S REPORTING**

**Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.**

**Gas Analysis Report must be attached.**
