FIELD INSPECTION FORM

Loc ID 376781 Inspector Name: Trujillo, Aaron On-Site Inspection 2A Doc Num: _____

Status Summary:

- THIS IS A FOLLOW UP INSPECTION
- FOLLOW UP INSPECTION REQUIRED
- NO FOLLOW UP INSPECTION REQUIRED

Operator Information:

OGCC Operator Number: 72085
Name of Operator: PETRO-CANADA RESOURCES (USA) INC
Address: 717 17TH STREET #2900
City: DENVER State: CO Zip: 80031

Findings:

- 4 Number of Comments
- 1 Number of Corrective Actions
- Corrective Action Response Requested

 TRANSECT RESULTS OF REFERENCE AREA% _____
 TOTAL % OF DESIRABLE VEGETATION COVER _____
 VEGETATIVE COVER _____

Comment:

	<p>Inspection doc. #82501486 required operator to perform reclamation in accordance to COGCC 1000 series reclamation rules, and at a minimum (but not limited to) re-contour/re-grade access road and well pad and revegetate. Location and roads have not been re-contoured/regraded, unable to find evidence to suggest any additional remediation/reclamation activities have been conducted. Per previous conversations w/ Noble/Petro-Canada. An extension of 5/31/2017 had been provided to perform the required reclamation. Refer to doc. #2225689. CA and CA date remains in place.</p>	
Corrective Action:	<p>In accordance to landowner recommendations, re-contour the location at the well pad, and the access road from top of hill to the location, per COGCC reclamation requirements. Bare, unvegetated soil within the fenced area may require additional remediation and seeding to achieve uniform vegetative cover. Remediate soils (if needed) until soil meets COGCC 910-1 standards. Establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture requested by the landowner. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed.</p>	Date 05/31/2017

COGCC Comments		
Comment	User	Date
Current access road conditions have created a straight, channelized pathway for stormwater. If not reclaimed per COGCC rules, roads will remain at risk of incision and degradation.	trujilloam	07/28/2017
Following comment taken from Inspection Doc. 682500936 Documented areas within the fenced area of the location remain unvegetated. Pit and well file documents state location underwent remediation for soils impacted by produced water. Figure 2 in the attached document show large, unvegetated areas within the fenced areas. Based on this information, the bare, unvegetated areas within the fenced area are likely due to salt kill from produced water. Access road and location have not been re-contoured per reclamation requirements; slopes, ruts and depressions remain evident.	trujilloam	07/28/2017
