

Photo 1: View of the project area from the southwestern corner facing center.

Photo 2: View of the southern portion of the project area from the southwestern corner of the well pad facing eastward. Revegetation is progressing with a mix of desirable species and weeds such as smooth brome (*Bromus inermis*), western wheatgrass (*Pascopyrum smithii*), yellow clover (*Melilotus officinalis*), and dropseed (*Sporobolus* sp.).

Photo 3: View of musk thistles within the project area.

Photo 4: Another view of musk thistle within the project area.

Photo 5: View of Canada thistles (*Cirsium arvense*) within the northwestern portion of the project area.

Photo 6: Another view of Canada thistles within the northwestern portion of the project area.

Photo 7: View of reclaimed channel within the project area appears to be functioning at this time.

Photo 8: View of another reclaimed channel with permanent stormwater controls at the entrance to the well pad.

Photo 9: View of the beginning of Transect 1, within the project area facing westward.

Photo 10: Birdseye view of vegetation at the midpoint along the vegetation transect within the project disturbance.

Photo 11: View of the beginning of Transect 2, within the reference area facing eastward.

Photo 12: Birdseye view of vegetation at the midpoint of Transect 2, within the reference area.
