Good morning Diane,

This well had unconfirmed cement on the backside. The attached CBL shows cement from 8222' up to a top of about 2900'. I would like to ask to cancel our original plan to perform a Sussex squeeze since we already have isolation over that zone.

We will still perform the Fox Hills squeeze to mitigate bradenhead pressure, and will run another log to confirm placement after the job.

Thank you,

Alex Caravaggio
