INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pit will be drained and prepared for decommissioning. Drill cuttings, liquids, the synthetic liner, and any stained soil beneath the liner will be excavated and tested for Table 910-1 parameters. These cuttings will then be stockpiled on-site before land farming begins. Upon removal of water in the pit, a discrete sample will be collected from the pit bottom materials to evaluate compliance with Table 910-1 standards for this material.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Five discrete samples of the pit bottom were taken on Sept. 23, 2016 - All passed 910-1.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

The pit on this site has been previously partially backfilled. The remainder of the pit will be backfilled using native rock and soil, regarded to conform to the surrounding ground surface. Noxious weeds will be controlled as necessary using approved methods. The exterior slopes will be laid back at a minimum 3:1. Top soil will be spread over all slopes and will be reseeded with an approved seed mix. Berry Petroleum has addressed and will accommodate the wildlife concerns during the final reclamation of this pad.

Environmental	Based on review of information presented it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site. Reclamation shall be in accordance to the 1000 Series Rules. REM #9764 will be closed and the status of the fresh water pit (Facility ID #289284) will be changed to CLOSED.	08/23/2017
