Maximum Surface Injection Pressure Calculation

Operator estimated pressure is 100-500 psi.

Assume fracture gradient of 0.6 psi/ft.
Head for fresh water is 0.433 psi/ft.
Top perforation is at 5050 ft

Pressure Calculation:

(Fracture Gradient – Head for Water) x Perforation Depth = Maximum Surface Injection Pressure

MSIP = (0.6 psi/ft – 0.433 psi/ft) x 5050 ft = 843 psi

COGCC will allow 850 psi in permit
