Attachment 4 - Analytical Reports

1 Introduction

Talon/LPE (Talon) was contracted by Whiting Petroleum Corporation (Whiting) to conduct site investigation assessment activities associated with a flowline release identified at the Nelson C1 site (Site) in Weld County, Colorado. The site is located at the northwest quarter of the southeast quarter of Section 18, Township 10 North, Range 58 West, 6th Principal Meridian at 40°50'10.72"N and 103°54'17.73"W (Attachment 1). The site is identified by the State of Colorado Oil and Gas Conservation Commission (COGCC) as Spill/Release Point Facility ID 441208. The Site Plan is shown on Figure 1 and the general site location is shown on Figure 3.

The following document is an assessment of site investigation activities including the installation of monitoring wells, and groundwater monitoring.

2 Objective

The primary objective of this investigation is to determine the nature and extent of soil and/or groundwater impacts resulting from a flowline release. The release was discovered and reported on COGCC Form 19 on March 30, 2015. Assessment and remediation activities are being conducted as part of COGCC Form 27 Number 9146.

3 Regulatory Framework

The COGCC has regulatory jurisdiction over oil and natural gas industry operations in the State of Colorado. Section 900 of the COGCC Rules is for Exploration and Production Waste Management. More specifically, Section 910 details the Concentrations and Sampling for Soil and Groundwater rules. The regulatory limits for specific analytes in soil and groundwater are detailed in Table 910-1 and are summarized below.

Compound	COGCC Table 910-1 Soil Concentrations	COGCC Table 910-1 Groundwater Concentrations
Benzene	0.17 mg/kg	0.005 mg/L
Toluene	85 mg/kg	1.0 mg/L
Ethylbenzene	100 mg/kg	0.7 mg/L
Xylenes (total)	175 mg/kg	10 mg/L
Naphthalene	23 mg/kg	Not Applicable
TPH (total volatile and extractable petroleum hydrocarbons)	500 mg/kg	Not Applicable

4 Site Characteristics

4.1 Geography

The site is located in the Pawnee Grasslands in Weld County, which is the northeastern part of Colorado. The Grasslands are part of the Colorado Eastern Plains and are relatively flat with the exception of the Pawnee Creek which drains into the South Platte River.

4.2 Geologic Summary

Surficial geology surrounding the area consists of Tertiary age fluvial deposits of the lower Ogallala Formation. More specifically, these deposits are Miocene in age and are composed of gray to brown and semi-consolidated, ashy sands and silt beds with volcanic ash beds. Deposited material hardened into sandstone and siltstone which are grouped into three formations: White River, Arikaree, and Ogallala.

4.3 Groundwater

According to the Colorado Division of Water Resources Website, there are no water wells within 1,000-foot radius of the Site.

Depth to groundwater levels as measured on June 15, 2017, in the 20 groundwater monitoring wells range from 27.15 to 40.17 feet below top of casing (Table 3), which are above-ground by approximately three (3) feet (ft). Several wells had measurable amounts of phase-separated hydrocarbons (PSH) during the monitoring event.

5 Field Investigation Activities

5.1 Monitoring Well Installation

On June 27, 2017, Talon personnel oversaw Drilling Engineers advance two (2) monitoring wells (MW-21 and MW-22). Both wells were drilled to approximately 40 feet below ground surface (bgs). The depths of the monitoring wells were determined in the field based on observed lithology, hydrocarbon odors, and PID values; the goal was to drill until no further odors or elevated PIDs were observed and a confining lithologic layer was observed. Boring logs detailing observed lithology, and PID values are included in Attachment 3.

Three (3) soil samples were collected from each of the borings during drilling efforts from depths ranging from 25-40 ft bgs. Sample locations were determined based on elevated PID values. Additionally, soil samples were collected from the bottom of each boring and above the assumed groundwater interface to provide additional vertical delineation of any impacts. The collected soil samples were submitted to Summit Scientific (Summit) in Golden, Colorado for analysis of benzene, toluene, ethylbenzene, and xylene (BTEX), total petroleum hydrocarbons (TPH) as gasoline range organics (GRO), and diesel range organics (DRO) via method SW8015. The remaining soils were stockpiled on-site on a plastic liner pending laboratory analytical results.

Both monitoring wells were constructed using 4-inch diameter Schedule 40 PVC casing and 10-slot screen. Each well was completed with 10/20 silica sand pack to two (2) ft above the top of the screen interval, sealed with bentonite chips to near-surface, and included an above-ground well mount in a concrete pad. Well completion details are included in Attachment 3.

Both monitoring wells were gauged on June 29, 2017. Monitoring well MW-21 was dry and monitoring well MW-22 was observed to have 0.19 ft of PSH. Therefore, groundwater samples were not collected from either well. Monitoring well MW-22 was purged until it became dry. Depth to water and depth to PSH values are summarized in Table 3. Purge water generated during development was placed in 55-gallon drums within the tank battery berm for secondary containment pending off-site disposal.

5.1.1 Discussion of Results

Table 1 in Attachment 2 summarizes the well completion and survey information. Table 2 summarizes the soil sample laboratory analytical results, and Table 3 includes well gauging data. A copy of the laboratory reports and chain of custody documentation is included in Attachment 4.

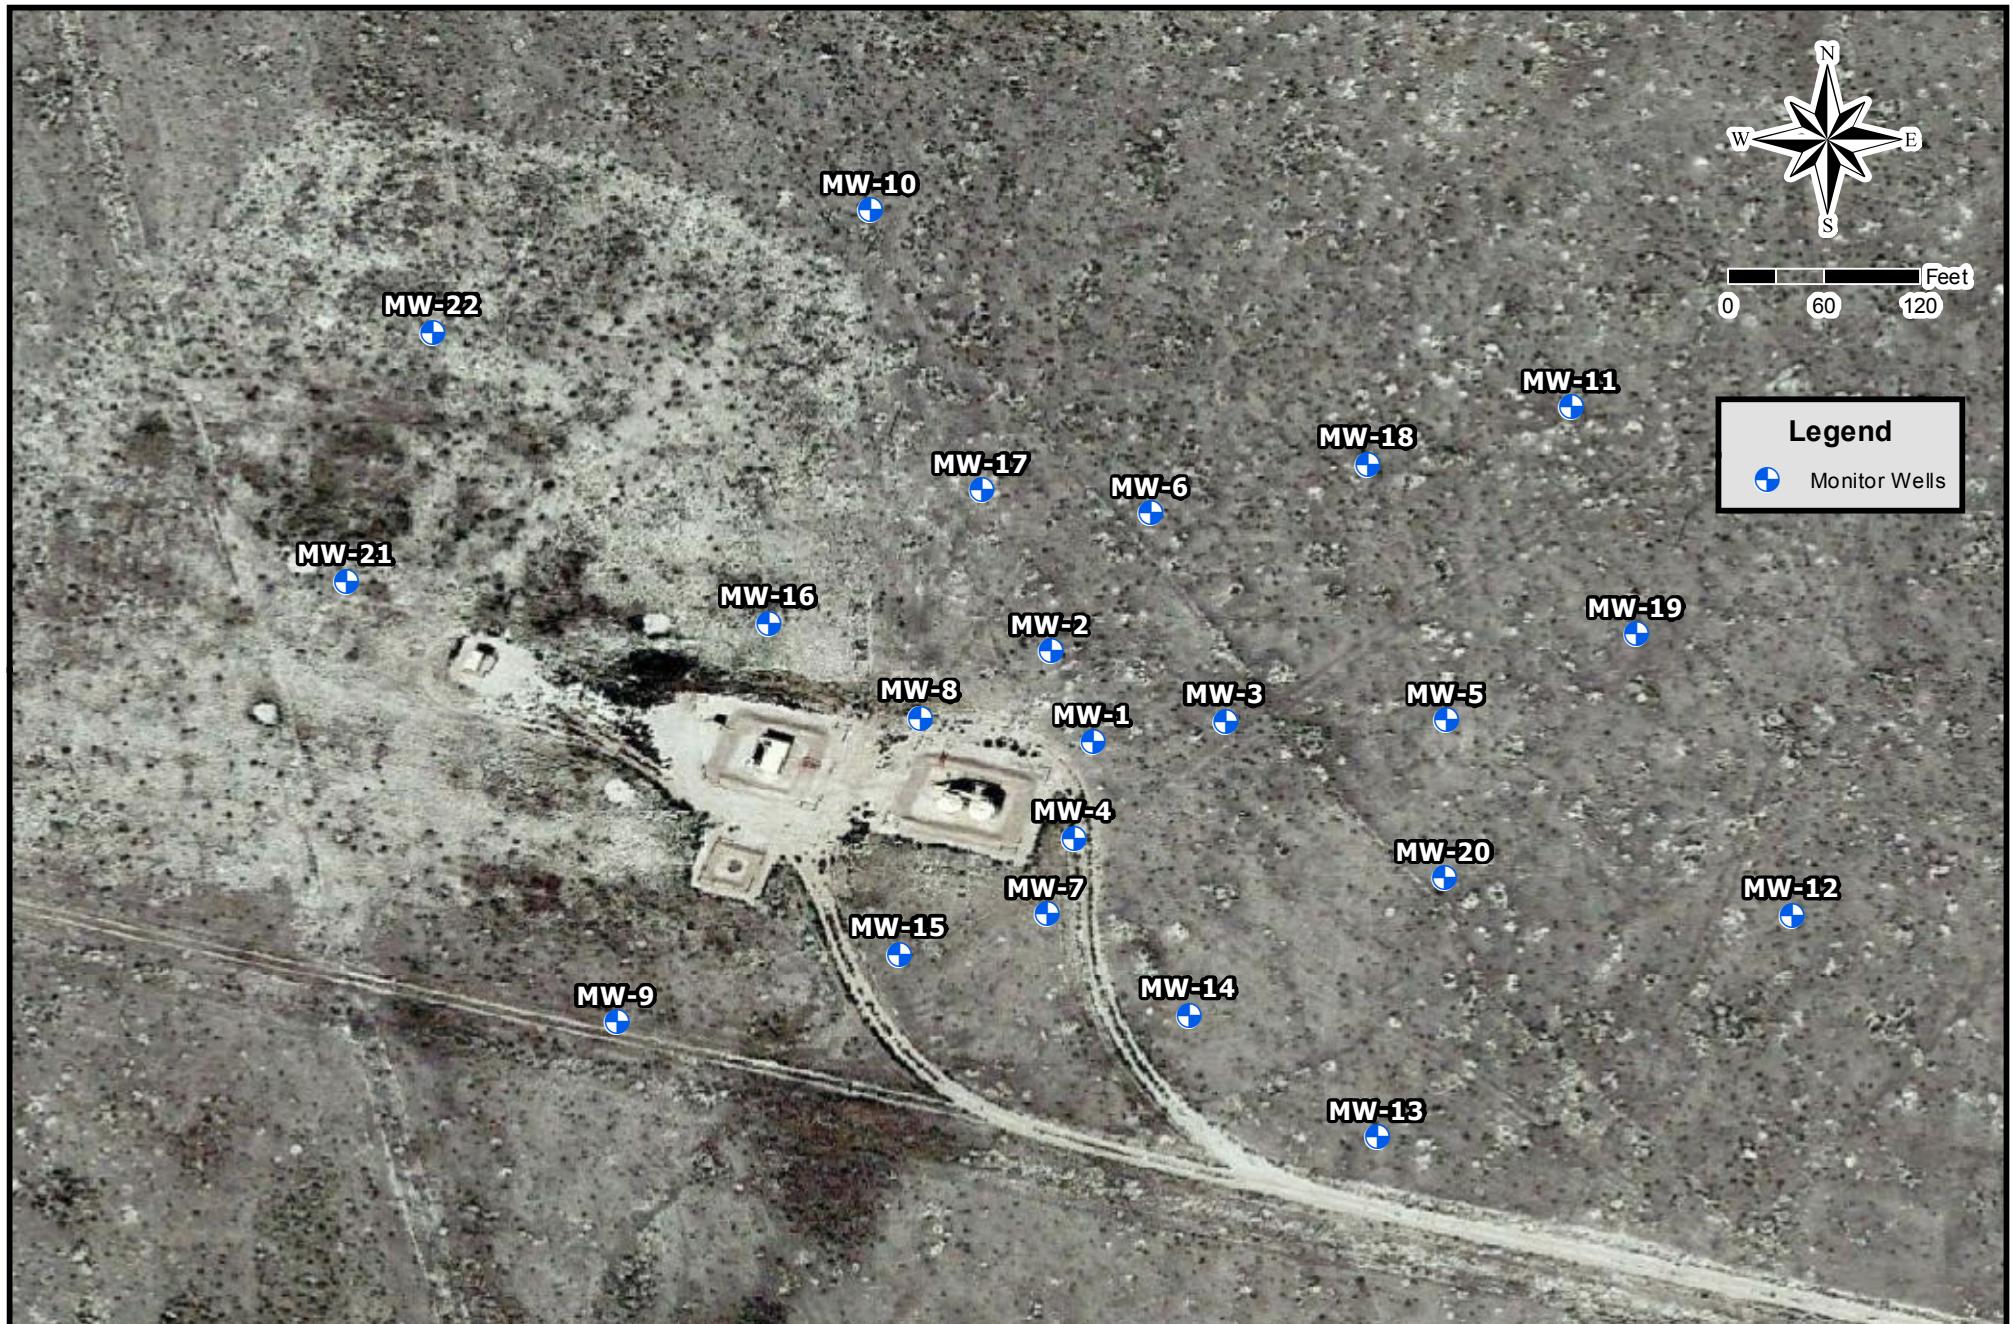

All soil analytical results were below laboratory detection limits (Figure 2). Groundwater samples were not collected due to MW-21 being dry and MW-22 having PSH levels greater than 0.1 feet. Talon will continue to monitor the wells during quarterly monitoring events.

6 Conclusions & Recommendations

The objective of this report was to document the nature and extent of the impacts at the Nelson C1 location. Talon has installed two (2) additional monitoring wells to assess soil or groundwater impacts from this release. All soil samples collected during these site activities were below laboratory detection limits. Groundwater samples were not collected, but Talon will continue to monitor all the wells on site during quarterly monitoring events.

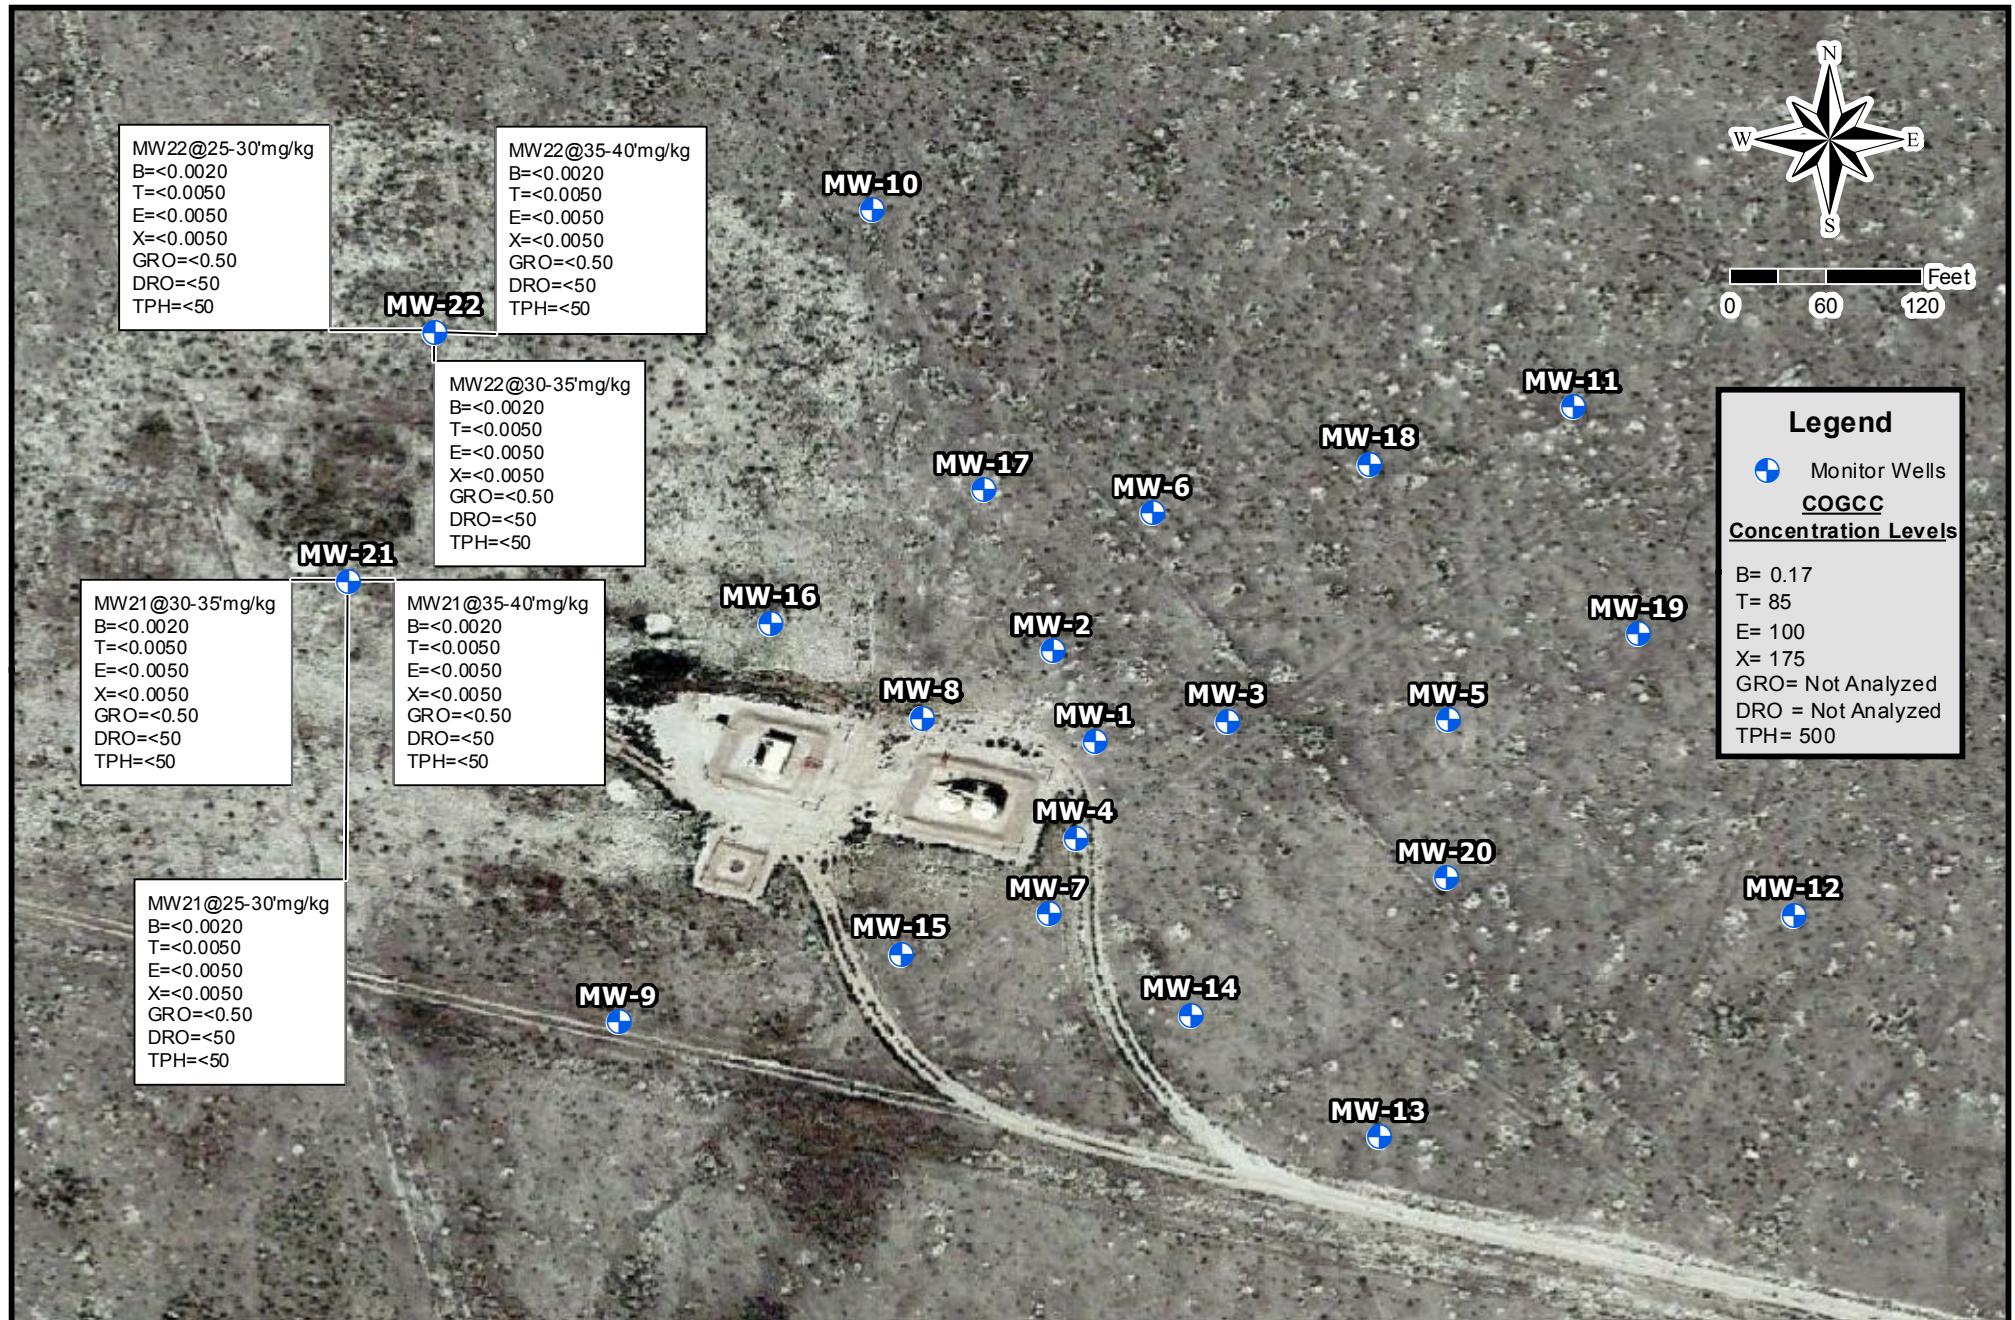

The presence of PSH in monitoring well MW-22 indicates groundwater impacts are not currently delineated for the west side of the site. Further subsurface investigation, such as installing additional monitoring wells, should be performed to provide additional delineation in this area.

packed in sand

Notes:

1. Exploratory borings were drilled on 06/27/2017 using a 4-inch diameter continuous flight power auger.
2. No free water was encountered at the time of drilling or when re-checked the following day.
3. Boring locations were taped from existing features and elevations extrapolated from the final design schematic plan.
4. These logs are subject to the limitations, conclusions, and recommendations in this report.
5. Results of tests conducted on samples recovered are reported on the logs.

(Describe)

Cooler ID						
Temp (°C)	<u>13.8</u>					

Thermometer ID: 61857155-K

	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature at 4°C +/- 2°C ⁽¹⁾ ?	<input checked="" type="checkbox"/>			<u>ON 4</u>
NOTE: If samples are delivered the same day of sampling, this requirement is met provided that there is evidence that cooling has begun.				
Were all samples received intact ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Was adequate sample volume provided ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
If custody seals are present, are they intact ⁽¹⁾ ?		<input checked="" type="checkbox"/>		
Are short holding time analytes or samples with HTs due within 48 hours present?		<input checked="" type="checkbox"/>		
Is a chain-of-custody (COC) form present and filled out completely ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Is the COC properly relinquished by the client w/ date and time recorded ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
For volatiles in water – is there headspace present? If yes, contact client and note in narrative.		<input checked="" type="checkbox"/>		
Are samples preserved that require preservation (excluding cooling) ⁽¹⁾ ?		<input checked="" type="checkbox"/>		
Note the type of preservative in the Comments column – HCl, H ₂ SO ₄ , NaOH, HNO ₃ , etc.		<input checked="" type="checkbox"/>		
If samples are acid preserved for metals, is the pH ≤ 2 ⁽¹⁾ ?		<input checked="" type="checkbox"/>		
Record the pH in Comments.		<input checked="" type="checkbox"/>		
If dissolved metals are requested, were samples field filtered?		<input checked="" type="checkbox"/>		
Additional Comments (if any):				

⁽¹⁾ If NO, then contact the client before proceeding with analysis and note in case narrative.
