

Plan of Development

General:

The DOE 1-W-26 Pad will be used to store excess cuttings generated from drilling operations on the PA 23-26 Pad. Once the PA 23-26 Cuttings Management area had been filled any additional cutting will be hauled by truck to the DOE 1-W-26 pad. After drilling operations are completed on the PA 23-26 Pad the cuttings hauled to the DOE 1-W-26 pad will be mixed, tested, and buried into the existing/proposed cut slope on the DOE 1-W-26 pad.

Pipeline:

One 2" steel injection pipeline (approx. 511') for the DOE 1-W-26 Injection well will be rerouted around the proposed excess stockpile area along the east side of the pad. The existing surface pipeline may be cut and capped near the south end of the pad temporarily if determined the line would not be in use during operations on the DOE 1-W-26 Pad.

Legend

- Proposed Daylight Line
- Proposed Pad or Pit
- Existing Road
- Proposed Stockpile
- Proposed Limit of Disturbance
- Existing Fence
- Proposed 2" Surface Injection Line Reroute
- Existing Gas Pipeline
- Existing Water Pipeline
- Existing Pad
