Brett,

Please go ahead and proceed with the excavation. I will upload this email and the figure to acknowledge the approval (for the record).

Thanks,
Carlos

Carlos,

I am not able to submit a form 27 supplemental under Caerus since the site is still Encana in the COGCC database, I am submitting this email in regards to the M23 pit remediation #9307, as we discussed Caerus would like to excavate the north end of the pit where impacts were found at ~1200 and ~2400mg/kg. Due to the relatively small area of impacts and shallow depth we would like to excavate the impacted area. The stockpiled soil on location will be sampled and clearance samples will be collected from the pit to close the remediation. We intend on backfilling the pit with the excavated soils if and when they meet COGCC table 910-1.

Please respond if you approve the excavation and sampling plan, a supplement Form 27 will be submitted after the location is transferred to Caerus within COGIS. I have attached a site map of the area to be excavated

Regards,

Brett Middleton
