General Comment:

Environmental**Spills/Releases:**

Type of Spill: PRODUCED WATER

Estimated Spill Volume: 5

Comment: Inspection of Spill #401399579. Spill consisted of ~5bbl of pw from subsurface dump line between separator and 300bbl PW/cond AST. AST is within poly-lined steel SPCC. Line has been excavated and exposed. Excavated soils are stockpiled within poly-lined dirt berms near south end of pad. No petroleum contamination observed within excavation such as staining, odor or sheen on small pools of rainwater.

Corrective Action: Per F-19 COA, continue to assess nature and extent of contamination with excavation and or borings and confirmation soil samples. Remediate to Table 910-1 standards and provide documentation in another Supplemental F-19 if the next phase attains Table 910-1 compliance. If not submit an F-27 with detailed assessment and remediation plan. If landfarming contaminated soil is required it must also be approved by surfaceowner. Closure data must include a figure showing spill area with sample locations plus laboratory results
