INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

The location was shut in and repairs were scheduled. See COGCC Document Number 401105539

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Thirteen (13) grab soil samples were collected as part of excavation activities. Additional soil samples will be collected via direct push as part of monitoring well installation activities. All soil samples were/will be analyzed for BTEX, naphthalene, TPH-GRO, and TPH-DRO following EPA Methods 8260c and 8015.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A grab groundwater sample was collected from the base of the excavation. Following monitoring well installation activities, quarterly groundwater samples will be collected from the monitoring wells. All groundwater samples were/will be analyzed for BTEX following EPA Method 8260c.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☒ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Monitoring wells will be installed to delineate dissolved impacts at the site. Quarterly groundwater samples will be collected to confirm the dissolved plume is stable and decreasing.

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Adsorbed soil impacts above COGCC Table 910-1 standards were removed via excavation on September 13, 2016.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

A groundwater site assessment is scheduled for September 21, 2017. Groundwater monitoring wells will be installed and monitored on a quarterly basis to confirm the dissolved plume is stable and decreasing. If natural attenuation is not occurring, a more active remedial approach will be evaluated.
