Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Suspected soil contamination upon removal of produced water storage tank. Site has been shut in since 6/7/2017. On 9/14/2017, CGRS screened soil using a PID. The most impacted soil was found at 1' bgs beneath the excavation bottom, directly between the edge of the produced water tank and the oil tanks. The concentration of organic vapors decreased slightly at 2' bgs, and drastically at 3' and 4' bgs. Trace hydrocarbon concentrations were still found at 4" bgs. One soil sample was retained for laboratory analysis. Impacted soil will be removed and properly disposed of.
