Disposal Description: (Drilling Waste Management)

Laramie plans to drill the wells within this project boundary with a dewatering system with no need for a reserve pit. Drilling fluids are recycled and re-used with cuttings being de-watered and captured in a catch pan, stacked in a cuttings management area and allowed to dry. Once the cuttings are dry and satisfy the COGCC for Rule 910 analytics, the cuttings will be stacked along the cut slope then buried and covered with a minimum of 3 feet of cover. This operation will occur after the completion of all the wells.

There are 9 wells with BHLs in the NE quarter of Section 21 which pass through BLM lease COC 010619. These wells will not be completed inside this BLM lease. The BLM has indicated that these wellbores do not require a BLM permit, nor do they constitute a BLM ROW. The wells are: BCU 0993-21-01E, BCU 0993-21-02E, BCU 0993-21-04E, BCU 0993-21-05E, BCU 0993-21-06E, BCU 0993-21-07E, BCU 0993-21-08E, BCU 0993-21-09E and BCU 0993-21-10E.

1	Drilling/Completion Operations	--Drilling/Completion BMP One of the first wells drilled on the pad will be logged open-hole with a triple combo log (HRI w/ SP,GR, CAL and Spectral Density/Dual Spaced Neutron) from TD into the surface casing. All wells on the pad will have a radial analysis bond log with gamma ray run on production casing from TD to surface after rig moves off pad. All wells not logged with an open hole log will have a cased hole NEO neutron emulated open hole log run from TD to surface. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open hole logs shall clearly state "No open-hole logs were run" and shall clearly identify (by API#, well name & number) the well in which open-hole logs were run.
