Comment: [Inspection #682502031 required operator to reclaim the location and access road including, by not limited to, removing utilities, gravel and revegetating. Access road has been re-contoured/re-graded, gravel and utilities have been removed and evidence suggest location has been reseeded. Canada thistle prevalent through out location and access road. See COGCC comments. Continue to manage and monitor location. Once location meets COGCC 1000 series standards and requirements, submit form 4 stating final reclamation complete.](#)

**COGCC Comments**

Comment	User	Date
Canada thistle observed throughout location and access road. This is a Colorado State Noxious weed and needs to be removed. Thistle observed likely had germinated this late summer/fall. With the recent frost and cooler temperatures many of these plants may have begun going into winter dormancy, where spraying may not be as efficient. Continue to monitor and manage the location for noxious weeds. Weeds will need to be removed no later than seed head maturity in 2018.	trujilloam	10/12/2017
