Comment:

SG contacted Jim Hughes to discuss results of the inspection on Wednesday (10/18/2017) morning. The inspection took place during removal of equipment used for completion operations. This week was SG's first availability to get a vacuum truck to the location and conduct clean-up activities due to the surface of the location being occupied by equipment and only partially visible the last two weeks. The vacuum truck cleaned out the cellars, and crews are currently scrubbing the well head to clean normal build-up on the well heads. Oily stains from engines were treated with microbes; any remaining material will be pick up and disposed of properly. Free standing fluid near the frac tanks was soaked up using soaker pads. The fluid is anticipated to be rainwater mixed with rust from the bottom of the frac tanks, however SG will conduct a soil test per table 910-1 to ensure soil is

within standards. SG continues to conduct clean-up activities in the same manner as all demobilizing operations.
