Environmental	Analytical data attached to this supplemental is from 2015. A new round of soil borings shall be drilled in summer 2018 to assess remediation progress and evaluate SVE system effectiveness. Borings should be drilled within the pit footprint and outside the perimeter (approximately 20 feet away) If no significant progress is obtained, the operator will propose a different approach to remediate the site.	10/24/2017
Environmental	PID readings from SVE system indicates effective removal of volatile hydrocarbons but does not provide information regarding the radius of influence. Please provide by November 30, 2017 information/calculations regarding SVE radius of influence, or if no testing was conducted, provide the rationale for estimating the aerial effectiveness of the SVE system.	10/24/2017
