Alex,

The ENPR30SP sample is from the cistern overflow from the ENPR5WW well. Historically a spring was in the valley east of the K35CDP but it has been dry for years. When I sampled the overflow "stock tank inlet" I originally thought it was the spring. See Carlos photos.

I have attached the analytical soil report for the excavated area within the pipeline ROW. 2 samples were collected at 7 feet which was below the pipeline. One was at the Point of Release "POR" and a second on the east (E) extent of the excavation. A third sample was collected from the same point as the 7 foot (E) "East" location but at 15'. I had the operator excavate to max depth with the track hoe to attempt to define vertical depth.

I will be out of the office on vacation beginning tomorrow afternoon through 10-23. Jake will be available if you have additional questions.

Regards,

Brett Middleton

**Subject:** Fwd: COGCC FIELD INSPECTION REPORT [Doc#689100084] POSTED NOTICE

Brett,

It is indicated that soil samples were collected and exceeded table 910-1 for organics and in-organics compounds. I could only find results of water samples. Please provide the analytical for the soil samples. You indicate that the sample, 20170913-ENPR-5WW is from a permitted water well. What is sample 220170913-ENPR-30SP?

*Excavation occurred at the point of release and the pipeline was repaired. While the excavation was open samples were collected from below the point of*

*release and in the down gradient extent of the excavation to a max depth of 15 feet. These initial analysis indicated impacts exceeding table 910-1 for*

*organic and in-organic compounds. The site investigation plan identifies 6 boring locations 3 on the ridge and 3 in the valley. Samples will occur from*

*areas identified in the field as impacted and a sample will be collected from below the impacts as a point of compliance. Depending on depth of impacts a*

*minimum of 2 grab samples will be collected from the soil borings these soils will be analyzed for 910-1 constituents. see attached site diagram.*

Thanks

Alex
