Operator Comments:

Bison Oil and Gas II, LLC respectfully requests confidential status for the drilling, completion and production for the Castor 8-59 19-24-16 horizontal well on the basis of new stimulation and drilling techniques in an area that has geologic and economic risks. Bison will be utilizing a stimulation design that has not been utilized in the prospect area that could substantially enhance well performance in an area that has historically been proved uneconomic. Bison's modified drilling and completion techniques were utilized in a drilling prospect in Arapahoe County that increased productivity to nearly 3x direct offset wells and the confidential status that was granted on that prospect by the COGCC allowed for Bison to lease in the area based on the results which greatly enhanced the value of the company and allowed for Bison to capitalize on the risk that was taken. The specific drilling and completion items that Bison will implement that is different from any well in the prospect area are the utilization of cemented monobore production casing, modified FR slickwater fluid system, modified wine-rack well spacing, and a 300 percent increase in sand placement compared to offset wells. Bison is taking a substantial risk to drill in this area given that offset wells are uneconomic and operators are currently running zero drilling rigs in the immediate area.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
