General Comment:

Engineering Integrity Inspection performed on November 8th, 2017 in response to initial form 19 spill report Doc #401438797 received by COGCC on 11/02/2017 that outlines: While performing annual flowline testing. Crews working on flowline identified leak. Upon further investigation and excavating affected area, contaminated soil was found. This location was recently acquired by BBC earlier in March 2017. Details of observations made during this field inspection are available in the flowline section of this report. Photo's uploaded can be accessed via link(s) at the end of this report.

Facility ID: 244011 Type: WELL API Number: 123-11803 Status: PR Insp. Status: EG

Flowline

#1	Type: Well Site	1 of Lines
----	-----------------	------------

Flowline Description

Flowline Type: Well Site Size: 2" Material: Carbon Steel
 Variance: No Age: 20+ Yrs Contents: Multiphase

Integrity Summary

Failures: External Corrosion Spills: Yes Repairs Made: Yes
 Coatings: Cathodic Protection: No

Pressure Testing

Witnessed: Test Result: Charted:

COGCC Rules (check all that apply)

☐ 1101. Installation and Reclamation ☒ 1102. Operations, Maintenance, and Repair ☐ 1103. Abandonment

Comment: COGCC Inspector met with the BBC contract supervisor on site (with Shorty's Well Service). The well site flowline (between wellhead and treater) has been removed; a new flowline is currently being installed. Spill response/ remediation activities are in progress; the majority of the contaminated soils have been removed. Note: Document and retain records of root cause of failure evaluation (of the flowlines that resulted in this release), measures taken to prevent the problem from reoccurring and description of all repairs/ replacements completed (*add information to COGCC supplemental form 19); perform flowline pressure testing to verify integrity of flowline repairs/ replacements completed (all lines/ retain charts & data) prior to returning well to production.

Corrective Action:
