General Comment:

Engineering Integrity Inspection performed on November 21st, 2017 in response to initial form 19 spill report Doc #401456481 received by COGCC on 11/13/2017 that outlines: During a tank battery rebuild at the Doris Ackerson B #1 facility, historical petroleum hydrocarbon impacts were encountered beneath the partially-buried produced water sump. Details of observations made during this field inspection are available in the flowline section of this report. Photo's uploaded can be accessed via link(s) at the end of this report.

COGCC Rules(check all that apply)

☐ 1101. Installation and Reclamation ☒ 1102. Operations, Maintenance, and Repair ☐ 1103. Abandonment

Comment: COGCC Inspector met with Anadarko contract personnel from ENERGES on site. The produced water vault and dump flowlines have been removed. The old lines were asbestos wrapped; abatement processes and disposal of materials completed. A new produced water vault/ dump lines (3 total/ crude oil, pw water, bypass) are scheduled to be installed after cleanup and remediation activities are completed. Note: Document and retain records of root cause of failure evaluation (tank or flowline failures), measures taken to prevent the problem from reoccurring; perform flowline pressure testing (dump lines/ well site flowline) to verify integrity of repairs/ reconnections completed (retain chart & data) prior to returning well to production.

Corrective Action:
