Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

An estimated 2 bbls of oil was released onto the well pad surface due to sump overflow. The sump that collects residual oil from the vapor recover tower overflowed due to valve from knockout tank being left open. Lease operator arrived on location and noticed release. Valve on knockout tank was shut-off stopping release. Roustabout crew was called out immediately to begin clean-up activity. This included using vac-truck to remove free oil from surface as well as excavating impacted soils for disposal.
