SOURCE: P

SOURCE TYPE: FLOWLINE

CAUSE: FAILURE EQUIPMENT

CAUSE INFORMATION: Flowline leak resulted in release of well over 25 gallons of condensate and produced water inside a hole, down from the surface approx. 5 ft, that connects with groundwater at 6--7 ft down, which was then carried by a French drain to a roadside ditch to a stormwater BMP sediment pond (off location). The line ran between the well head and the production separator. Carlos Lujan with COGCC has been on site.
