Dear Mr. Smith:

Ref: Warneke #1  
Sec 30 - 8N - 53W  
Key Field

Wednesday October 5th at 8:00AM I started the Warneke #1 pumping. As of 10:00AM October 15, 1966 the well has produced 820 barrel of oil, which is approximately 90 barrels a day. It is venting approximately 200,00 MFC of gas daily.

The well head samples show the fluid to be approximately 50 to 55 percent water.

Pumping well 9 strokes a minute on a 64 inch stroke.

Yours truly,

John H. Pivonka
