Details of Plan of Work: (State names of and expected depths to objective sands: Show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

We propose to drill the captioned well to an approximate depth of 4875 feet to evaluate the Dakota sandstone in the Luft Field.

8 5/8" casing will be run and cemented at approximately 600 feet.

If commercial production is encountered 5 1/2" casing will be cemented at approximately 4850 feet, and perforated opposite the 'Muddy' or Dakota sandstone (whichever proves productive.)

We will hydrafrac and/or acid treat the productive interval if necessary.
 Estimated Formation Tops: 'Muddy' 4750' Dakota 4850'

Approved: APR 14 1953
