Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

BLM inspection resulted in discovery of hydrocarbon contaminated dirt pile on top of HDPE liner at Samson facility that was P&A'd approximately 1995. Samson has no record of placement of contaminated soil at site. Soil sampling results showed excess TPH per Table 910-1. Samson will remove contaminated soil and liner then sample site, showing removal of TPH.

**OPERATOR COMMENTS:**

Please find the attached e-mail from Tracy Perfors, Natural Resource Specialist with the BLM. This e-mail shows Samson Resources satisfied the BLM in hauling off the contaminated soil that was placed on a pit liner. As well as reclaiming, seeding, and fencing off the site to aid in the revegetation of the site. If you have any questions, please let me know. Thank you.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

Environmental	Based on the information presented, it appears that no further action is necessary at this time and the COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be impacted, then further investigation and/or remediation activities may be required. In addition, the non-working surface area disturbed by the remediation activity shall be reclaimed in accordance with the 1000 Series Reclamation Rules plus all BLM requirements for Federal surface lands.	01/08/2018
