As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On January 5, 2018 at approximately 6:30 PM a release occurred when a tank containing biocide was filled with water but had a faulty valve. Secondary containment captured three barrels of the water mix prior to reaching capacity and overflowing 12 barrels to the grounds surface. Once observed, onsite company man plugged the valve, stopped transfer of water, and ordered available vac truck to recover what was on the ground and in containment. Impacted soil will be characterized and remediated as needed to comply with COGCC 900 Series Rules.
