Remarks and Recommendations

The IC #1.75 was drilled 90' to the west of the IC #1's after the latter was plugged and 1,163' due to severe lost circulation.

A pale lith was used from intermediate casing point to 4475', and was replaced with a button bit to TD. 50' ScHs shows' wet and dry samples were evaluated from 3900'-4475', and 50' wet and dry samples were evaluated from 4450' to TD. As a result of sample, and electric log evaluations, the IC #1.75 was plugged and abandoned.
