Description

1	Drilling/Completion Operations	One of the first wells drilled on the pad has been logged with open-hole Resistivity Log and Gamma Ray Log from TD into the surface casing and meets the 317.p logging requirement. All wells on the pad will have a cement bond log with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs shall clearly state "No open-hole logs were run" and shall clearly identify the Hangs A2 (API #05-045-12337) as the well in which open hole logs were run.

Permit	Two other wells on location are producing and have logs. BMP for 317.p needs to be rewritten. Waivers for 603.a.(1) are not attached to previously approved form 2. Requested to upload waivers.	01/18/2018
Engineer	Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. This information was used in addition to locally-available geophysical logs and hydrogeologic information was used to evaluate the adequacy of the operator's proposed surface casing setting depth. The deepest water well within one mile is 300 feet. Offset Well Evaluation: Existing offset oil and gas wells within 1,500 feet of this wellbore meet standards. No mitigation required. Removed Operator's comment that cement will be >500 feet above TOG. See Condition of Approval #5 for cement coverage requirements. Changed distance to nearest wellbore belonging to another operator to greater than 1500'. The Antero locations are abandoned and no longer proposed.	12/11/2017
