INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

While conducting flowline testing a leak was discovered and after investigation impacted soils were observed. The release was reported to the COGCC in a Form 19 (COGCC Document #401438797). Impacted soil was removed via excavation.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Twenty-two (22) grab soil samples were collected during excavation activities. The samples were collected from the excavation floor and sidewalls. The sidewall samples were collected at the depth exhibiting staining and/or highest photo-ionization detector (PID) measurements. The soil samples were analyzed by a certified laboratory for TPH-DRO, TPH-GRO, and BTEX. Sample locations and excavation dimensions are shown on the attached figure.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A grab groundwater sample was collected during excavation activities. The sample was analyzed by a certified laboratory for BTEX. Monitoring wells will be installed for more detailed groundwater characterization.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☒ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Groundwater monitoring wells will be installed to fully investigate and delineate any groundwater impacts.

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Impacted soil above COGCC Table 910-1 standards was removed via excavation.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Impacted soil above COGCC Table 910-1 standards was removed and taken to Buffalo Ridge landfill. Soils were screened with a PID (Photoionization Detector) throughout the excavation. Once PID screenings were below 200 ppm (parts per million), a sample was collected and submitted to a certified lab to ensure compliance with the COGCC Table 910-1 standards.
