VEGETATIVE COVER _____

Comment:

	<p>This location does not meet reclamation regulations; insufficient vegetative cover, location is not progressing towards reclamation standards. Large areas of the location predominantly composed of undesirable weedy plant species such as kochia and russian thistle. Little desirable perennial plant establishment was observed below canopy of weeds. Weedy plant species have created a monoculture and their densities are likely hindering desirable vegetation establishment. Additional reclamation activities, including but not limited to weed management, will need to be conducted.</p>	
Corrective Action:	<p>Perform weed management and additional reclamation in accordance to COGCC 1000 series rules and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels on location and areas of access road where vegetative establishment is not progressing. Use a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed. To take advantage of the spring growing season, revegetation activities shall be complete no later than 4/30/2018.</p>	Date 04/30/2018
Overall Final Reclamation	Fail	Well Release on Active Location <input type="checkbox"/> Multi-Well Location <input type="checkbox"/>
