Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

SRC Energy acquired this well from Noble Energy with an effective date of 9/1/17. The well was shut-in by Noble prior to the change of operator to SRC and continues to be shut-in. On Wednesday 2/14/18, SRC staff, COGCC's Rick Allison, and the landowner Tim Iverson met at the opened up disconnected flowline section for inspection and discussion. After walking the line from the hammer union related to Spill ID 454029, another hammer union was found to the ENE on the line at the above GPSd lat/long. PID field screening was conducted by SRC staff in front of all parties from the soil under the hammer union that showed an elevated result indicating the potential of a historical spill at that hammer union location. SRC has contracted Tasman Geosciences to do an onsite impact assessment on Tuesday 2/20/18. Tasman was originally scheduled to be out there on 2/13/18, but had to postpone due to their geoprobe operator having the flu. Tasman's scope of work is to now assess both spill impacts.
