BBC requests to permit the BHL/TD for the well to be 400' FWL of Section 33. The ability to perforate will be physically constrained by the wet shoe sub and float collar which will be located no less than 460' FWL of Section 33. BBC will not perforate or completed the wellbore within the 460' setback area of the spacing unit. Attached is a well location plat which indicates the Bottom of Completed Interval and BHL TD.

Distance to the nearest completed portion of the wellbore in the same formation and nearest existing or proposed wellbore belonging to another operator were measured utilizing BBC's Petra Geological Software, anti-collision plans, and BBC's offset well evaluation. Distances to the nearest existing or proposed wellbore belonging to another operator including PA'd wells is 432 ft - State Pronghorn V-32-31MRLNB (05-123-42353).

The distance to nearest competed portion of offset wellbore permitted or completed in the same formation is the State Pronghorn V-32-31MRLNB (05-123-42353), which is approximately 432 ft away.

Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	Drilling/Completion Operations	BBC will adhere to the COGCC Policy for Bradenhead Monitoring effective 5/29/12.
2	Drilling/Completion Operations	One of the first wells drilled on the pad will be logged with open-hole Resistivity Log and Gamma Ray Log from the kick-off point into the surface casing. All wells on the pad will have a cement bond log with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The horizontal portion of every well will be logged with a measured-while-drilling gamma-ray log. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs shall clearly state "No open-hole logs were run" and shall clearly identify (by API#, well name & number) the well in which open-hole logs were run.
