Dear Director Lepore:

Kerr-McGee Oil & Gas Onshore LP ("KMG") respectfully requests approval for an exception to Rule 317.p to only run a cased-hole pulsed neutron, gamma-ray, and cement bond log from the kickoff point into the surface casing on one of the first wells drilled on this multi-well location. A Cement Bond Log with cased-hole gamma-ray log will be run on production casing or on intermediate casing if production liner is run. The other wells on this multi-well location will be logged with only a cement bond log with cased-hole gamma-ray log from kickoff point into the surface casing. Rule 317.p of the Colorado Oil and Gas Commission's Rules and Regulations requires wells to be logged with a minimum of a resistivity log with gamma ray. The above-named wells are requested to be exempt from this requirement due to an internal error of not running the open hole resistivity log with gamma ray and was required on the approved Form 2s.

The Operator will run a Cased Hole Neutron Log in conjunction with CBL Logs prior to completions operations on one well on this pad. This log will be noted on Preliminary Form 5 for each well on the pad and the CNL will be attached to the Final Form 5 of the well it is run on and noted on the Final Form 5's for the other wells on this pad. Estimated date for running the CNL is 2nd quarter/2018.

Should you have any questions, please contact our office. Thank you for your consideration.

Sincerely,

Kerr-McGee Oil & Gas Onshore LP
