## OPERATOR COMMENTS AND SUBMITTAL

Comments: The proposed well will be a replacement production well for a well that is P&A. The proposed well is located in the Adena J-Sand Unit. We plan to drill to TD, run open hole logs, run production casing, perforate the J-Sand and production test the well to determine the type of pumping equipment that will be required. The well will be connected to a central processing facility where oil, gas and water are separated. The produced water will be distributed to nearby unit injection wells.

## Best Management Practices

No	<u>BMP/COA Type</u>	<u>Description</u>
1	Drilling/Completion Operations	Logging open hole resistivity with gamma ray will be run on this well to describe the stratigraphy of the wellbore and to adequately verify the setting depth of the surface casing and aquifer coverage. A CBL will be run on all production casing or, in the case of a production liner, the intermediate casing, when these casing strings are run.
2	Drilling/Completion Operations	Rule 604.c.(2)J.ii Backup stabbing valves be required on well servicing operations during reverse circulation. Valves shall be pressure tested before each well servicing operation both low-pressure and high pressure fluid.
3	Drilling/Completion Operations	Rule 604.c(2)I Rule 604.c.I: Upon initial rig-up and at least once every thirty (30) days during drilling operations thereafter, pressure testing of the casing string and each component of the blowout prevention equipment including flange connections shall be performed to seventy (70%) of working pressure or seventy (70%) of the internal yield of casing, whichever is less. Pressure testing shall be conducted and the documentation results shall be retained by the operator for inspection by the Director for a period of one (1) year. Activation of the pipe rams for function testing shall be conducted on a daily basis when practicable.
4	Drilling/Completion Operations	Rule 604.c.(2).O. Drilling and Completion - All loadlines shall be bullplugged or capped.
5	Interim Reclamation	Rule 1003.d(1) Drilling pit closure on crop land and within 100 year floodplain. Drilling pit reclamation, including the disposal of drilling fluids and cuttings, shall be performed in a manner so as to not result in the formation of an impermeable barrier. Any cuttings removed from the pit for drying shall be returned to the pit prior to backfilling, and no more than de minimis amounts may be incorporated into the surface materials. After the drilling pit is sufficiently dry, the pit shall be backfilled. The backfilling of the drilling pit shall be done to return the soils to their original relative positions. Closing of the drilling pit shall occur no later than three (3) months after drilling and completion activities conclude.
