### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Oil skim tank is in service. Pit is drying.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Sampling will be conducted in the pit at each wall and the pit bottom. Grab samples will be taken at each wall approximately three feet above the pit floor and one grab sample will be obtained at the center of the pit floor. Each sample will be taken starting at a depth of one foot to eliminate any wind-blown sand that has accumulated over time. Proposed pit sampling locations are show on the attached figure. Samples will be obtained using stainless steel scoop following proper decontamination before and between sampling, and placed in laboratory supplied glass containers. One composite sample will be obtained from the pit floor by collecting soil from four locations within the pit floor and thoroughly mixing before placing in sample containers. One sample will be obtained from an area not affected by oil operations to establish a background value for inorganics.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## **SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

Skim tank is in service.

## **REMEDIATION SUMMARY**

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

In order to facilitate the closure of the existing skim pit, soil sampling will be conducted along the pit walls and bottom after contaminated soil is removed. Once the soil analysis indicates the concentrations meet Table 910-1 standards and upon approval from the State, the pit will be backfilled with native soil. Evacuation and transportation of visibly stained soil from the skim pit will be conducted. Once impacted soil has been removed, confirmation soil sampling will be conducted in these areas to determine if the remaining soil meets Table 901-1 standards.
