Met operator on location. Observed flowline abandonment on the Green #1 with Vic Behrens directing the work. They had 2 excavations open. One was for the buried concrete produced water vault and the other was at the location where the separator was, where the riser came up for the well to separator flowline. What smelled to me like hydrocarbon contaminated soils were encountered in both excavations. This is based on grab samples from the soils that were dug out and piled on surface next to the excavations. Groundwater was encountered in the bottom of the separator excavation. I commented to Vic that someone should be documenting the soil removal and extent of the apparent spill. Ryan Dornbos <ryan@petersonenergyoperating.com> responded to me 6/13/17. He submitted a Form 27 on behalf of Colton LLC for the removal of the PW vault removed from the Green #1 Battery.	sutphind	04/04/2018
