**Photo 1.** Photo taken from the eastern location on December 19, 2017, facing South. Interim reclamation areas are not reflective of reference area vegetative levels. Kochia (*Kochia scoparia*) is the dominate vegetative growth throughout the southern interim reclamation area. Some portions appear to be mowed while other portions have not been controlled.

**Photo 2.** Photo taken from the eastern location on April 5, 2018, facing North. Appears the Operator has mowed Kochia since the previous inspection. Does not appear the Operator has performed the other required interim reclamation activities due on or before April 30, 2018.
