Comment: Weeds appear to be controlled at this time. An area in the eastern portion of the project area where it appears an erosional channel was repaired, needs seeding and stabilization.

Corrective Action: Area with bare soils in the eastern fill slope needs revegetation. If current conditions are not favorable for seeding, erosion control materials such as erosion control blanket or flexterra, can be installed until seeding timing is favorable, but no later than November 1, 2018.

Comment: Wattles in the northeastern project area are full of sediment and need maintenance. Wattles on the eastern edge appear to be functioning at this time, but will need monitoring and maintenance. As described above, stabilization is needed on bare soils in the eastern fill slope until stabilized with desirable perennial vegetation. See attached photos.

Corrective Action: Maintain wattles in the northeastern project area and stabilize bare soils in the eastern project area, as described above.
