**Photo 3.** Photo taken from the eastern perimeter of the location, facing North. Ditch and berm BMP has been installed along the entire perimeter of the location. Portions of the berm do not appear to be stabilized. An unconsolidated berm BMP is not a proper functioning BMP. Photo also illustrates ditch BMP filling up with fines from unconsolidated soil material from the well pad. Appears topsoil is being stored along the northeastern and southwestern perimeter of the location.

**Photo 4.** Photo taken from the northeast perimeter of the location, facing West. See comments under Photo 3.
