Photo 1: Photo taken of sign at location.

Photo 2: Photo taken from the southeast end of the construction site, facing north. Photo shows operator implemented surface roughening along perimeter of the location. It is noted that surface roughening is a temporary control that should be used in conjunction with other BMPs, and due to ongoing stormwater events, additional BMPs should be considered and implemented. Additional BMPs will need to be installed to replace the surface roughening once the pad has been constructed and stabilized.
