### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Plans have been prepared to support decommissioning and removal of the well site and production equipment associated with final reclamation of this location. In accordance with COGCC Rule 905.b, soil samples, and if present, groundwater samples will be collected during closure of buried or partially buried produced water vessels to assure compliance with COGCC Table 910-1 allowable limits. In addition, field screening of disturbed soils will be conducted during equipment removal, and plugging and abandonment (P&A) activities, and samples will be collected for laboratory analysis if any indications of impacts are identified. Identified impacts will be reported as required for each discovery, and a Form 19 will be submitted.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

If no suspected release is identified during closure of the produced water vessel, one discrete grab soil sample will be collected directly beneath the water vessel upon removal for laboratory analysis. If a release is discovered during decommissioning of this facility (and confirmed through soil screening and/or laboratory analysis), additional excavations may be conducted to further delineate horizontally and vertically. If the extent of impacts is reached and/or remaining impact analytical results are needed for future remediation activities, discrete soil samples will be collected from the sidewalls and base (if groundwater is not present) and analyzed for organic constituents (TPH and BTEX), and inorganic constituents (pH, EC, and SAR).

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered during excavation activities, one sample will be collected and analyzed for BTEX.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**OPERATOR COMMENT**

This form was prepared for the purpose of generating a remediation project number to support decommissioning of the well site and production equipment associated with final reclamation of this location. It is intended to meet the requirements of COGCC Rule 905.b for closure of a buried or partially buried produced water vessel and Rule 906.c for remediation of spills/releases. Should soil or groundwater impacts be identified during removal of the produced water vessel, or while decommissioning other related production equipment at this location, required notifications will be completed for each discovery, including preparation of a Form 19. This form identifies multiple facilities, since the partially buried produced water vessel being removed (40.342725/-104.992951) is on a tank battery (Location ID: 419411) which is wrongly associated with Noble Energy Inc (Operator# 100322) in COGIS. The wells referenced in this form were included so they can be associated with the tank battery.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
