Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On May 23, 2018, approximately 2 barrels of water-based drilling fluid were released outside of containment at the Kerbs T 13-02 wellhead. The release occurred due to trapped pressure being temporarily relieved while tripping pipe out of the well during workover operations. Approximately 2 barrels of released fluids were recovered via vacuum truck. Site assessment activities are ongoing and will be summarized in a forthcoming Supplemental Form 19 Spill/Release Report. A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.
