General Comment:

BP AMERICA PRODUCTION COMPANY # 10000
Inspections, All SanJuanCOGCC@bp.com
Naomi Azulai 970-232-1439 naomi.azulai@bp.com
Date of Inspection: 03-20-18
Type of Inspection: Form 2A, Containment, Stormwater
Location Name: SMITH 1-20 1 Pad; SMITH 01-20 # 1 well
Location ID #: 325385
Location: La Plata County; SWNW, Sec 20, T34N, R6W
Form 2A# 401569365 (Draft)
API #: 05-067-06285
Permanent stormwater and containment BMPs for this well pad expansion and the original well pad (perimeter berm, diversion trenches, silt fences, straw wattles, rock check dams, and other spill and stormwater control equipment) and access road (borrow ditch with rock check dams for sediment control) are in-place and these stormwater controls indicate no offsite migration of fluids or sediment; cut and fill slopes of the original well pad have been partially to mostly re-vegetated; a 6" to 8" earthen berm placed around most of the well pad perimeter for containment of temporary drilling tanks and temporary frac tanks; straw and straw wattles placed beyond berms for surface soil erosion control; additional stormwater controls will be required for the existing well pad area and the tank containment area of this oil and gas location; access road will need to be moved due to portions near the well pad cross onto forest service land; no evidence of leaks or spills at wellhead; tank has secondary containment - no evidence of leaks or spills; signage for tank and wellhead are adequate; location is within a designated setback location; no evidence of fugitive dust or odors reaching nearby residence during previous drilling and completion operations. Location is in a sensitive area due to close proximity to surface water and potential shallow groundwater. Revegetation of interim reclamation area is progressing with establish grass.
