General Comment:

BP AMERICA PRODUCTION COMPANY # 10000
Inspections, All SanJuanCOGCC@bp.com
Naomi Azulai 970-232-1439 naomi.azulai@bp.com
Date of Inspection: 03-20-18
Type of Inspection: Form 2A, Containment, Stormwater
Location Name: Secord 17U-34-6 1 Pad; Secord 17U-34-6 # 1X and Secord 17U-34-6 # 1 wells
Location ID #: 334337
Location: La Plata County; NWSW, Sec 17, T34N, R6W
Form 2A# 401570747
API #: 05-067-09008 and 05-067-09009
Permanent stormwater and containment BMPs for this well pad expansion and the original well pad (perimeter berm, diversion trenches, silt fences, straw wattles, rock check dams, and other spill and stormwater control equipment) and access road (borrow ditch with rock check dams for sediment control) are in-place and these stormwater controls indicate no offsite migration of fluids or sediment, however, some rills are evident on sloped surfaces; a 6" to 8" earthen berm placed around portions of the well pad perimeter for containment of temporary drilling tanks and temporary frac tanks; straw and straw wattles placed beyond berms for surface soil erosion control; additional stormwater controls will be required for the existing well pad area and the tank containment area of this oil and gas location; no evidence of leaks or spills at wellhead; tank has secondary containment - no evidence of leaks or spills; signage for tank and wellheads are adequate. Location is not in a sensitive area. Revegetation is progressing within the interim reclamation area; portions of the interim reclamation area have dense grassy vegetation; other portions of the cut-slope and well pad have sparse revegetation which will need to be monitored and re-seeded if revegetation does not progress.
