COMMENTS:

The Golding 4 Tank Battery will be upgraded to support an increase in the estimated produced water from the NR 23-3 Pad (Loc ID #422211). The existing tank battery consists of six (6) 500 barrel produced water tanks and four (4) 300 barrel condensate tanks. The existing 300 barrel tanks will be removed and replaced with three (3) 200 barrel condensate tanks. A new tank battery will be installed adjacent to the existing tank battery (north side), and will consist of two (2) 500 barrel produced water tanks and one (1) 400 barrel condensate tank. Total capacity of the tank battery will be 5,000 barrels. The existing emission control device (ECD) will be relocated to the south side of the existing tank battery. A pump will be installed south of the existing tank battery to eliminate the need to haul produced water from the Golding 4 Tank Battery. A new 4-inch produced water pipeline (approx. 990') will be installed from the Golding 4 Tank Pad to an existing 4-inch water pipeline south of the pad. See attached construction and facility layout drawings for details.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
